

EASYLAB AI · LUXEMBOURG · 2026 EDITION

# No more projects. An AI subscription.

*The EasyLab Flow model.*

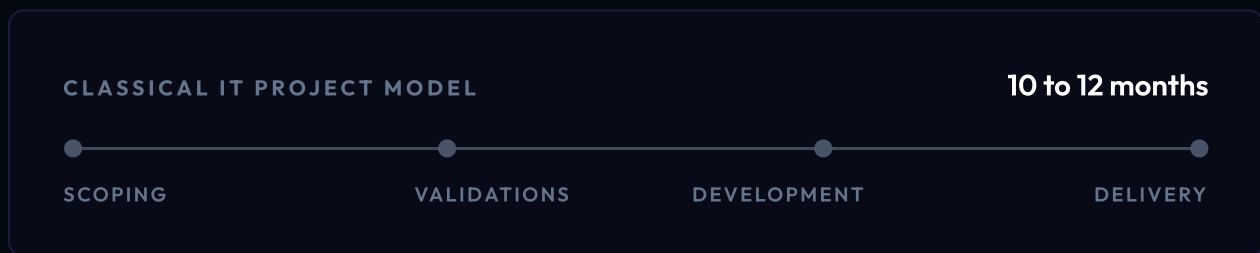

BANKS · INSURERS · AIFMS · FUNDS · MANCOS · FAMILY OFFICES · INDUSTRY

# Your AI projects ship already obsolete.

*The IT project model was not built for AI.*

Procurement cycle. Vendor due diligence. Compliance file. Scoping. Development. Acceptance. Production rollout. Ten to twelve months later, you ship. The reference model has already changed three times.

In regulated finance and in industry, AI adoption hits the same wall. Methods inherited from classical software impose a pace that no longer matches the cadence of models. By the time you go live, the state of the art has moved. You pay to catch up, never to move ahead.

*" The IT project model was designed for software that does not move. AI moves every month. "*

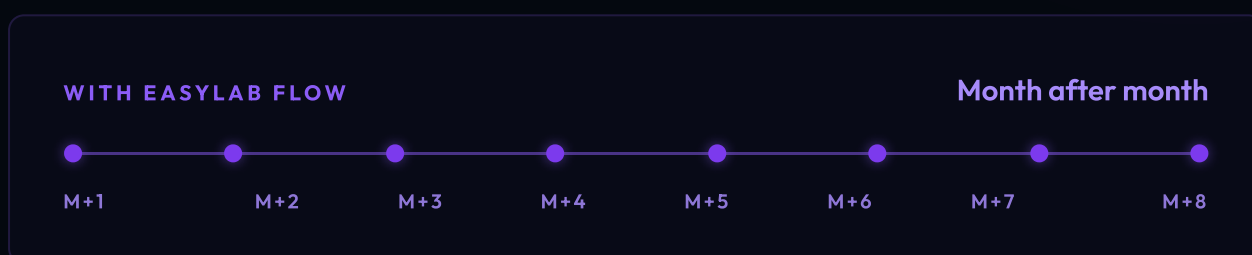

PHILIPPE HOUGARDY · CO-FOUNDER EASYLAB AI

# A stable contractual frame. An evolving software.

*EasyLab Flow inverts the equation.*

The contract is set once. Compliance is framed at entry. Governance is documented. What changes, month after month, is the software delivered. You do not reopen procurement, compliance, or due diligence. You open the tap.

Each monthly milestone delivers a new automation, a new integration, a new iteration of the deployed model. You stay on the state of the art without renegotiating the base.

# One frame. Three principles.

*Everything flows from the same contractual equation.*

EasyLab Flow rests on three simple principles. A single entry point. A pace you can dial. A stable frame backed by an evolving software. Everything else follows from there.

## 01

### **KYC once**

One vendor due diligence at entry. One compliance review. Then you open the tap. No renegotiation for each new service delivered.

## 02

### **Adjustable pace**

Your monthly fee defines your delivery capacity. You arbitrate speed like bandwidth, in line with your operational priorities.

## 03

### **Stable contract, evolving software**

Frame fixed and DORA / CSSF compliant. Software that evolves. No amendment to migrate between models. You stay on the state of the art without going back through procurement.

*" You buy a team and a pace. Not a frozen deliverable. "*

PHILIPPE HOUGARDY · CO-FOUNDER EASYLAB AI

# Three steps. Thirty days.

*From scoping to first service in production.*

## D+0

### Scoping

Thirty minutes on a real case. Scope, data, access, expectations.  
Contractual frame signed. Once.

## D+14

### First service

First Flow service in production.  
Integration into your tools, active monitoring, first metrics.

## D+30

### First results

Metrics measured. Iteration on scope. Next monthly milestone prepared. You decide what comes next.
